# Reimagine the workspace to drive positive patient outcomes

## Workspace Solutions for the Edge: Healthcare

### Empower clinicians and staff with anywhere, anytime access to critical insights for data-driven decisions

Deliver the performance you need to boost mobile productivity and drive improved patient outcomes, while maintaining IT operational control and improving efficiency with secure digital workspaces designed and configured for the healthcare industry.

Workspace Solutions for the Edge: Healthcare powers your secure digital workspace, delivering peak performance while addressing the challenges created by today's complex mobile environments:

- Application-optimized: Tested and integrated for optimal performance

- Highly flexible fabrics: Supporting a range of current and future capabilities

- System-on-chip: Technology designed for high-compute efficiency

- Dense form factor: Hot-pluggable components and significantly less cabling.

- Optimized resources: Configured with either dedicated or shared resources

- Reduced risk: Consolidated control, security, and backup of sensitive data and intellectual property

- Compliant: Maintain governance, audit, security, and compliance with centralized data and desktop management.

- Pay-as-you-go: Optional consumption-based pricing for increased flexibility with costs aligned to IT and financial goals

## Delivering data and apps to the point of impact

Doctors and clinical staff need access to on-demand information to deliver the best patient care. And they need it wherever they are—hospitals, clinics, remote offices, or at home—and at any time of the day or night. Anytime, instant access to health records, applications, and data can quite literally mean the difference between life and death.

HPE's Workspace Solutions for the Edge delivers the innovation you need to drive positive patient outcomes by delivering applications and data to the point of impact. At the same time—from an IT perspective— it allows you to maintain IT operational control, improve operational efficiency, and ensure privacy with secure digital workspaces designed and optimized for the healthcare industry.

## Reimagining the future with secure digital workspaces

Together, Citrix and HPE are delivering secure digital workspaces that empower clinicians and healthcare staff by giving them the freedom and flexibility to change how they do their work. This stimulates creativity, drives productivity, and inspires innovation to deliver the best possible patient care at the optimum price.

Powered by HPE Moonshot—massively-parallel, software-defined servers designed specifically for the applications they run—Citrix Workspace offers a flexible and integrated way to deliver and manage apps, desktops, data, and devices in a contextual and secure fashion. As a secure digital workspace, Workspace Solutions for the Edge allows you to realize the benefits of hybrid- and multi-cloud workspace environments while simplifying management and security.

## Anytime remote access— fast, simple, and affordable

Workspace Solutions for the Edge: Healthcare enables you to rapidly provision and easily manage secure digital workspaces while ensuring that patient data resides in the data center, rather than on individual endpoints. It provides a rich, virtual, clinical application environment and seamless access to electronic health records (EHRs), apps, images, and data—all accessible from BYO devices to operating theatre monitors.

Leveraging the unique innovation of HPE Moonshot, combined with the capabilities of Citrix XenDesktop®, NetScaler® and XenApp® to extend the desktop to mobile devices, the solution delivers secure, cost-efficient hosted desktops and applications at speed for a consistent user experience.

### Deliver flexible, available workspaces

Whether delivering graphics-intensive images to multiple displays of confidential patient health information to mobile devices, HPE Moonshot provides the flexibility and performance you need. HPE Moonshot's unique architecture offers purpose-built HPE ProLiant Server cartridges aligned to each workload to produce optimal results. This enables IT to deliver a variety of diverse applications and desktop solutions from a single system to any number of users without compromising performance.

### On-demand access from any device

Citrix XenDesktop and XenApp enables clinical staff to work from anywhere, at any time, and on the device of their choice. Secure access to the full range of applications, images, and data allows them to be productive—regardless of time or location—while still enjoying a high-performance workspace experience.

### Secure and compliant workspaces

With patient privacy and clinician productivity non-negotiable, centralized management provides reliable access and ensures the protection of confidential patient data, reducing the risk of data theft of loss while improving regulatory compliance. It speeds up mobile connections across any device and improves time-to-resolution when problems do occur. In addition, by simplifying support and eliminating resource-intensive and time-consuming upgrades, the solution minimizes the risk of downtime that could impact patient support.
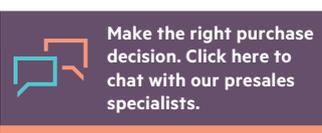

### Complete portfolio of services

To help optimize your deployment and increase user productivity, HPE Pointnext Services or one of our qualified HPE partners offers the expertise, experience, and best practices that you need. Offering unique financing and technology refresh programs, HPE Financial Services enables financial flexibility, allowing you to shift CAPEX to OPEX, and driving change in IT consumption and behavior while reducing costs.

## HPE and Citrix— accelerating results

For over 20 years, Citrix and HPE have been the pioneers of remote application and desktop delivery. Joint investments set the standard for purpose-built, secure digital workspaces delivering rich, seamless, and high-performance mobile experiences by matching the infrastructure to the workload. The result is world-class digital collaboration and a borderless, productive workplace—only from HPE and Citrix.
